

Quick Check 1.2 · Inputs, Outputs, and Functions

Algebra 1 · Unit 1

VERSION A · PAGE 1/2

Name: _____

Date: _____

Show enough work to make your thinking clear.

1. Substitute and evaluate.

Substitute a value for a variable.

Evaluate $4x - 7$ when $x = -3$.

2. Use order of operations.

Use order of operations correctly.

Evaluate: $20 - 4(3) + 2^2$

Show the order of your steps, not just the final answer.

Quick Check 1.2 · Inputs, Outputs, and Functions

Algebra 1 · Unit 1

VERSION A · PAGE 2/2

Read the graphs carefully. Use the axis labels and scale.

3. Read the ordered pair from the graph.

Read a graph using its scale.

The y-axis is labeled in increments of 5. Write the coordinates of point P.

P = (_____ , _____)

4. Identify both intercepts.

Identify and interpret intercepts when they are shown.

Use the graph. Write the x-intercept and y-intercept as ordered pairs.

x-intercept: (_____ , _____)

y-intercept: (_____ , _____)

Quick Check 1.2 · Inputs, Outputs, and Functions

Algebra 1 · Unit 1

VERSION B · PAGE 1/2

Name: _____

Date: _____

Show enough work to make your thinking clear.

1. Substitute and evaluate.

Substitute a value for a variable.

Evaluate $5a + 2$ when $a = -4$.

2. Use order of operations.

Use order of operations correctly.

Evaluate: $18 + 2(5) - 3^2$

Show the order of your steps, not just the final answer.

Quick Check 1.2 · Inputs, Outputs, and Functions

Algebra 1 · Unit 1

VERSION B · PAGE 2/2

Read the graphs carefully. Use the axis labels and scale.

3. Read the ordered pair from the graph.

Read a graph using its scale.

The y-axis is labeled in increments of 5. Write the coordinates of point P.

P = (_____ , _____)

4. Identify both intercepts.

Identify and interpret intercepts when they are shown.

Use the graph. Write the x-intercept and y-intercept as ordered pairs.

x-intercept: (_____ , _____)

y-intercept: (_____ , _____)

Quick Check 1.2 · Inputs, Outputs, and Functions

Algebra 1 · Unit 1

VERSION C · PAGE 1/2

Name: _____

Date: _____

Show enough work to make your thinking clear.

1. Substitute and evaluate.

Substitute a value for a variable.

Evaluate $12 - 3m$ when $m = -2$.

2. Use order of operations.

Use order of operations correctly.

Evaluate: $25 - 3(4) + 2^3$

Show the order of your steps, not just the final answer.

Algebra 1 · Unit 1

VERSION D · PAGE 1/2

Name: _____

Date: _____

Show enough work to make your thinking clear.

1. Substitute and evaluate.

Substitute a value for a variable.

Evaluate $6 - 2p$ when $p = -5$.

2. Use order of operations.

Use order of operations correctly.

Evaluate: $16 + 5(2) - 2^3$

Show the order of your steps, not just the final answer.
