I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

Evaluate.

$f(x) = 2x + 5;\ f(-3)$

2. I can use input-output rules to represent relationships.

Write a rule.

Inputs 0,1,2 give outputs 4,7,10.

3. I can use input-output rules to represent relationships.

If $y = 2x - 1$, list outputs for $x = 0, 1, 2$. Then solve $2n + 3 = 11$.

4. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.
