

Quick Check 1.1 · Multiple Representations of Relationships

Algebra 1 · Unit 1

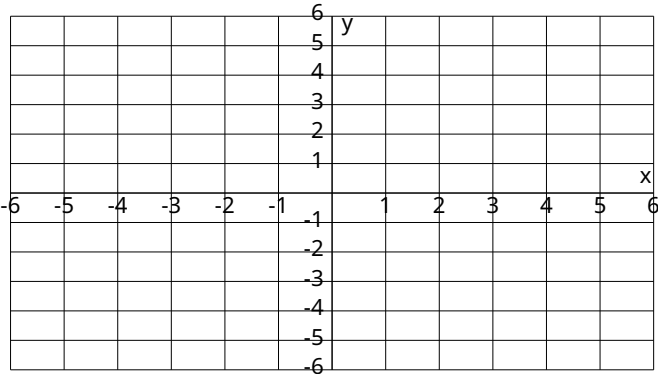

Version A

Show your thinking. Write on the page.

1. Plot the point.

U1-MG01-IC01 · Plot and read ordered pairs.

Plot P(-3,4) on the graph. Label the point.

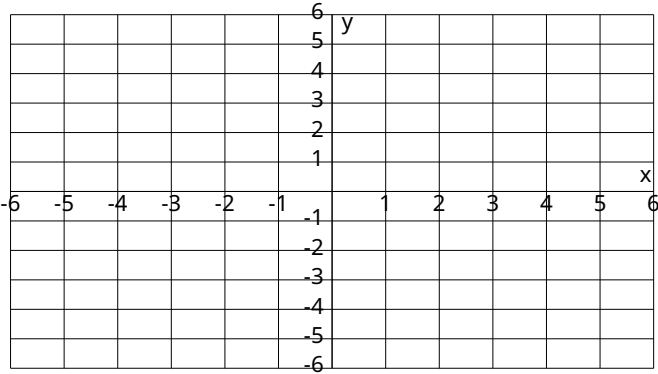

2. Use the x-axis and y-axis.

U1-MG01-IC02 · Use the x- and y-axes correctly.

For Q(5,-2):

- 1. Which axis tells you how to move for 5?
- 2. Which axis tells you how to move for -2?

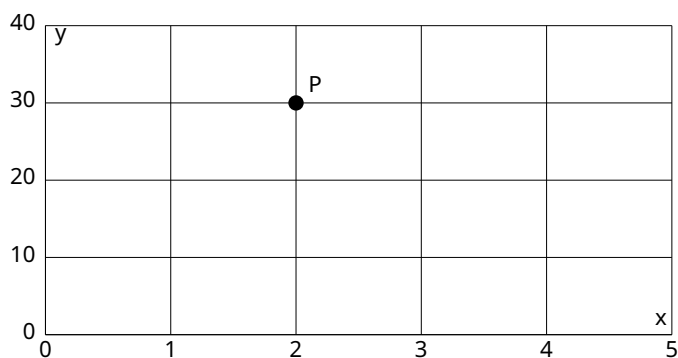

Then plot Q.

3. Use the graph scale.

U1-MG01-IC03 · Read a graph using its scale.

Sam says the point's y-value is **3** because it is 3 grid spaces above 0.

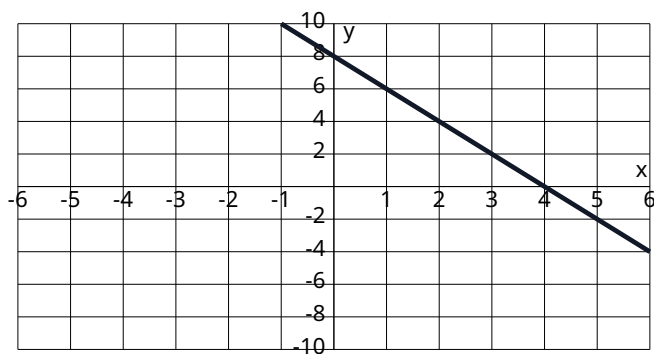

What did Sam forget to use? What is the correct y-value?

4. Name the intercepts.

U1-MG01-IC04 · Identify and interpret intercepts when they are shown.

Mia says (0,8) is the x-intercept because it is on an axis.

What is wrong? Name the intercept at (0,8). Then give the x-intercept.

Quick Check 1.1 · Multiple Representations of Relationships

Algebra 1 · Unit 1

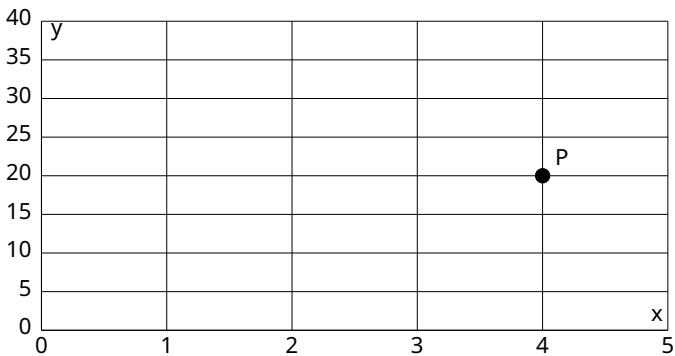

Version B

Show your thinking. Write on the page.

1. Use the graph scale.

U1-MG01-IC03 · Read a graph using its scale.

Lee says the point's y-value is 4 because it is 4 grid spaces above 0.

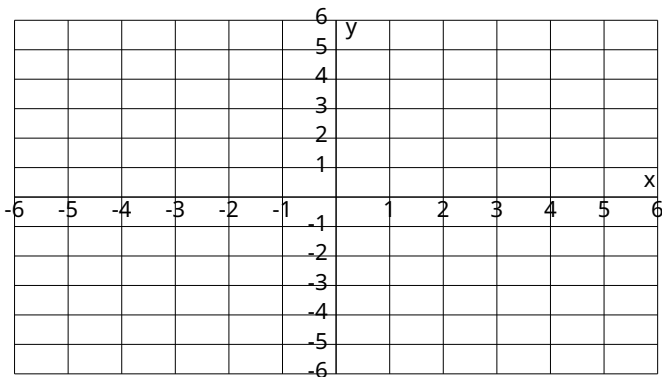

What did Lee forget to use? What is the correct y-value?

2. Plot the point.

U1-MG01-IC01 · Plot and read ordered pairs.

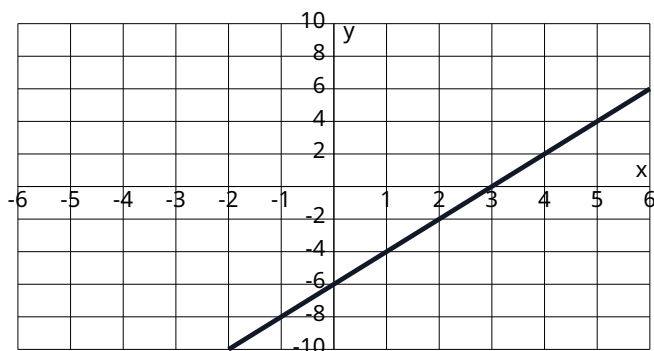

Plot P(4,-3) on the graph. Label the point.

3. Name the intercepts.

U1-MG01-IC04 · Identify and interpret intercepts when they are shown.

Noah says $(0, -6)$ is the x-intercept because it is on an axis.

What is wrong? Name the intercept at $(0, -6)$. Then give the x-intercept.

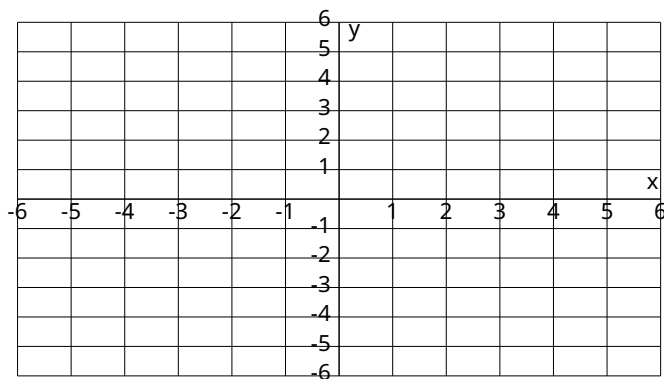

4. Use the x-axis and y-axis.

U1-MG01-IC02 · Use the x- and y-axes correctly.

For $Q(-4, 3)$:

1. Which axis tells you how to move for -4 ?
2. Which axis tells you how to move for 3 ?

Then plot Q .

Quick Check 1.1 · Multiple Representations of Relationships

Algebra 1 · Unit 1

Version C

Show your thinking. Write on the page.

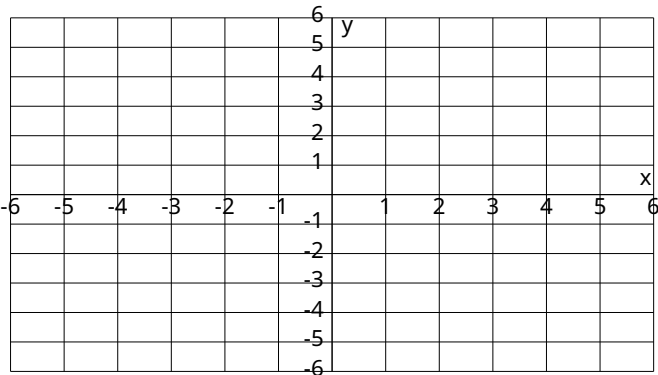

1. Use the x-axis and y-axis.

U1-MG01-IC02 · Use the x- and y-axes correctly.

For Q(2,-5):

- 1. Which axis tells you how to move for 2?
- 2. Which axis tells you how to move for -5?

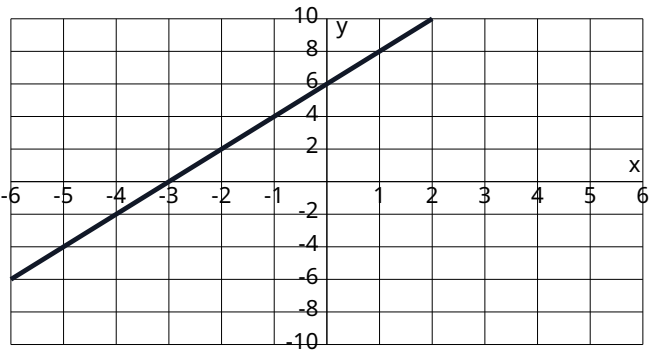

Then plot Q.

2. Name the intercepts.

U1-MG01-IC04 · Identify and interpret intercepts when they are shown.

Eli says (0,6) is the x-intercept because it is on an axis.

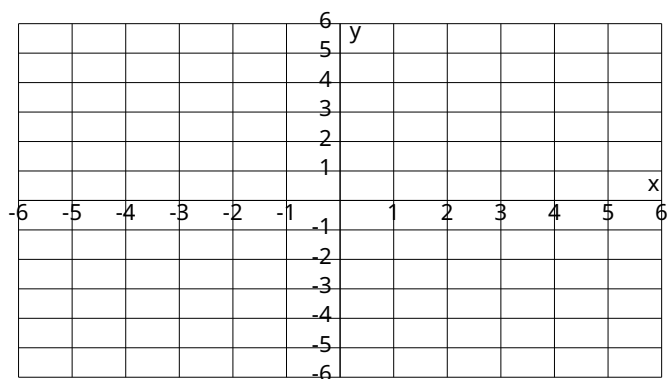

What is wrong? Name the intercept at (0,6). Then give the x-intercept.

3. Plot the point.

U1-MG01-IC01 · Plot and read ordered pairs.

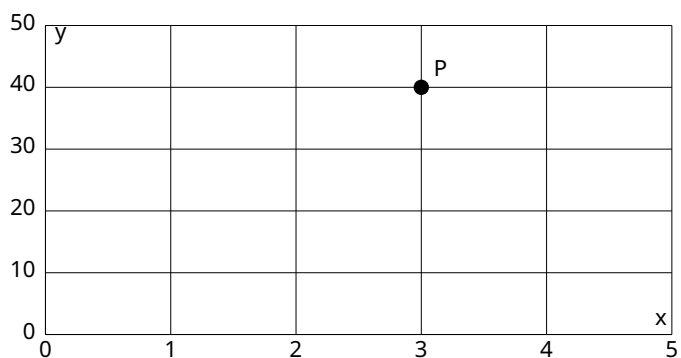

Plot P(-5,-2) on the graph. Label the point.

4. Use the graph scale.

U1-MG01-IC03 · Read a graph using its scale.

Ava says the point's y-value is **4** because it is 4 grid spaces above 0.

What did Ava forget to use? What is the correct y-value?

Quick Check 1.1 · Multiple Representations of Relationships

Algebra 1 · Unit 1

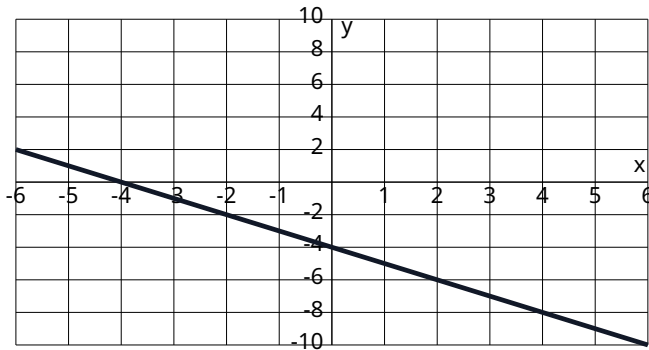

Version D

Show your thinking. Write on the page.

1. Name the intercepts.

U1-MG01-IC04 · Identify and interpret intercepts when they are shown.

Zoe says $(0,-4)$ is the x-intercept because it is on an axis.

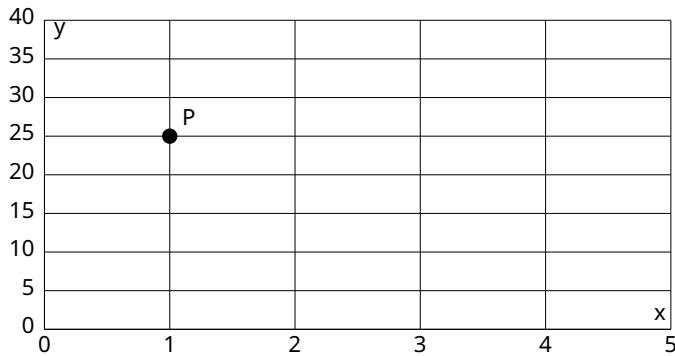

What is wrong? Name the intercept at $(0,-4)$. Then give the x-intercept.

2. Use the graph scale.

U1-MG01-IC03 · Read a graph using its scale.

Kai says the point's y-value is 5 because it is 5 grid spaces above 0.

What did Kai forget to use? What is the correct y-value?

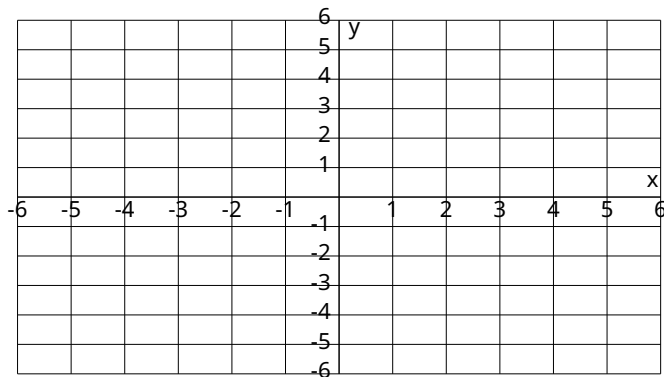

3. Use the x-axis and y-axis.

U1-MG01-IC02 · Use the x- and y-axes correctly.

For $Q(-3, -4)$:

1. Which axis tells you how to move for -3?
2. Which axis tells you how to move for -4?

Then plot Q .

4. Plot the point.

U1-MG01-IC01 · Plot and read ordered pairs.

Plot $P(2, 5)$ on the graph. Label the point.
