Coordinate-Plane Graphs · One-Off Practice Packet

Name: _____ Date: _____

Complete all 15 questions. Show enough work or reasoning to make your thinking clear.

1. I Can: Plot and read ordered pairs.

Plot the point $R(5, -7)$ on the coordinate plane. Label the point R.

2. I Can: Plot and read ordered pairs.

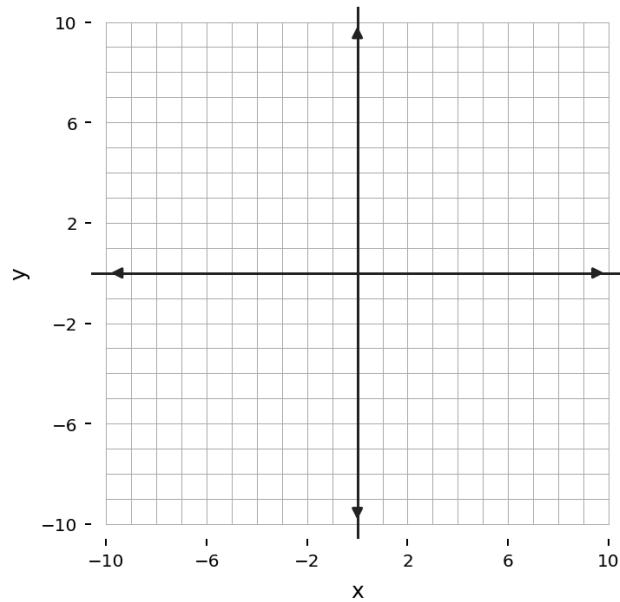

Start at the origin. Move 4 units left and then 7 units down. Write the ordered pair for the ending point.

3. I Can: Plot and read ordered pairs.

A student says, "I moved 5 units right and 4 units down from the origin, so the point is $(-5, -4)$." Explain the error and write the correct ordered pair.

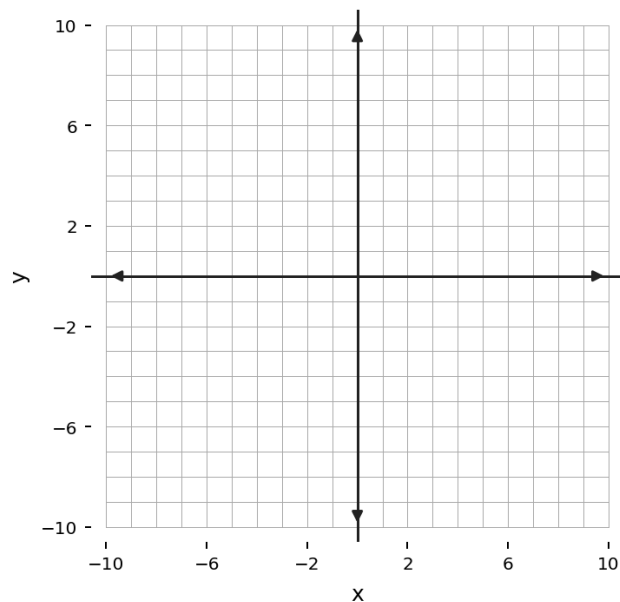

4. I Can: Plot and read ordered pairs.

Plot the point $S(0,-6)$ on the coordinate plane. Label the point S.

5. I Can: Use the x- and y-axes correctly.

For $T(-3,5)$, state which axis controls the -3 movement and which axis controls the 5 movement. Then plot T.

6. I Can: Use the x- and y-axes correctly.

A graph will show how the amount of water in a tank changes as minutes pass. Which quantity belongs on the x-axis and which belongs on the y-axis? Give a one-sentence reason.

7. I Can: Use the x- and y-axes correctly.

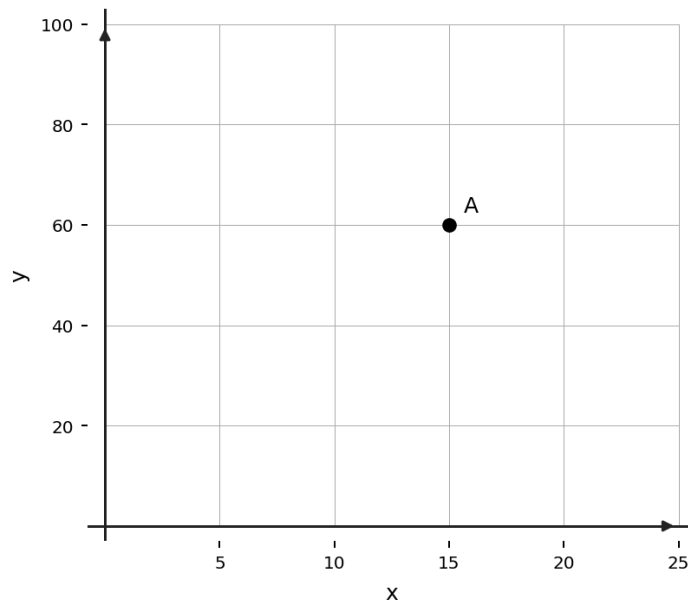

A student plots $W(4,-2)$ by moving 4 units down and 2 units right. Explain the axis mistake and describe the correct moves.

8. I Can: Use the x- and y-axes correctly.

A graph will show total money collected as the number of tickets sold increases. Which quantity belongs on each axis? Explain briefly.

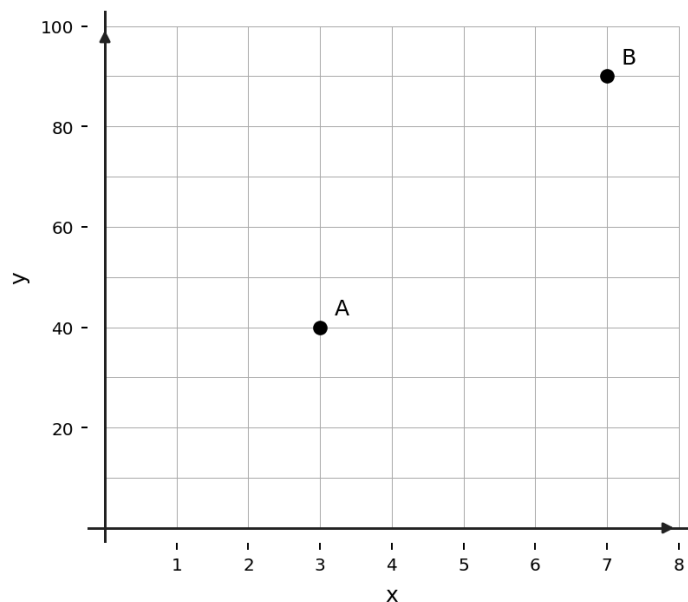

9. I Can: Read a graph using its scale.

Use the scale on the graph to write the ordered pair for point A.

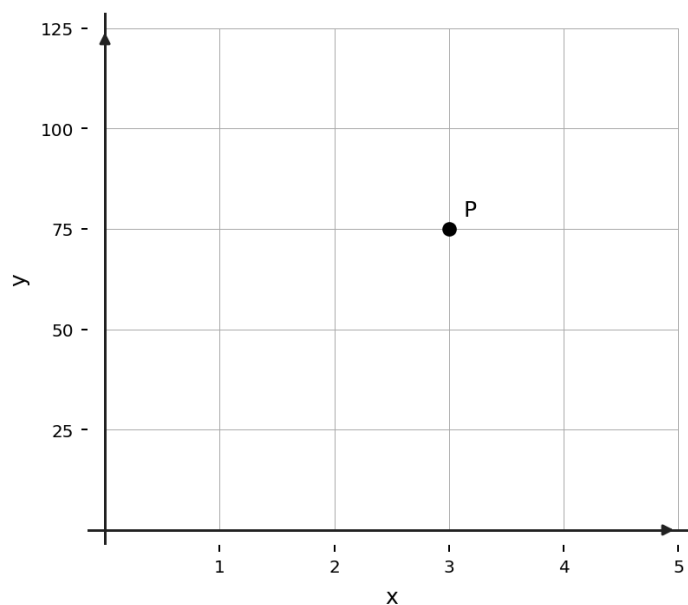

10. I Can: Read a graph using its scale.

Use the graph scale to read the y-values of A and B. By how much is B's y-value greater than A's?

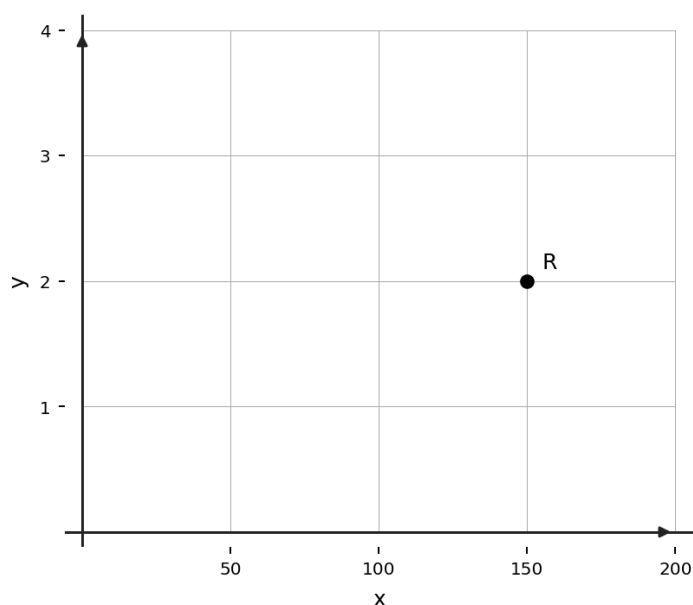

11. I Can: Read a graph using its scale.

Point P is shown on the graph. A student says P has y-coordinate 3 because it is three gridlines above 0. Explain the error and give P's correct y-coordinate.

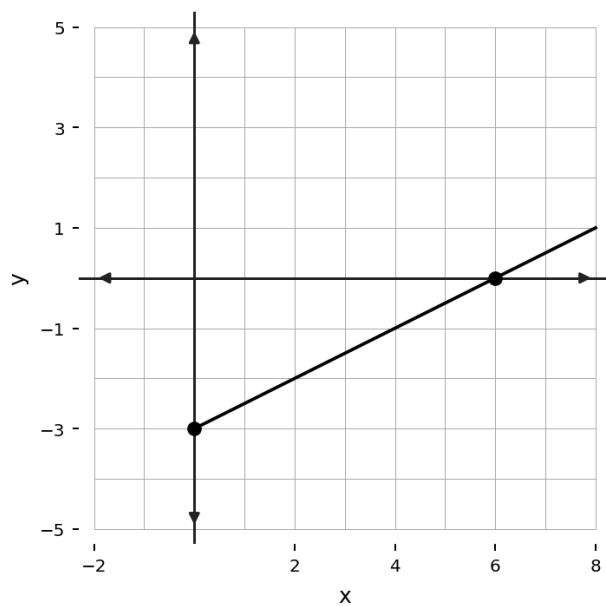

12. I Can: Read a graph using its scale.

Point R is shown on the graph. A student says its x-coordinate is 3 because it is on the third vertical gridline to the right of 0. Explain the error and give the correct x-coordinate.

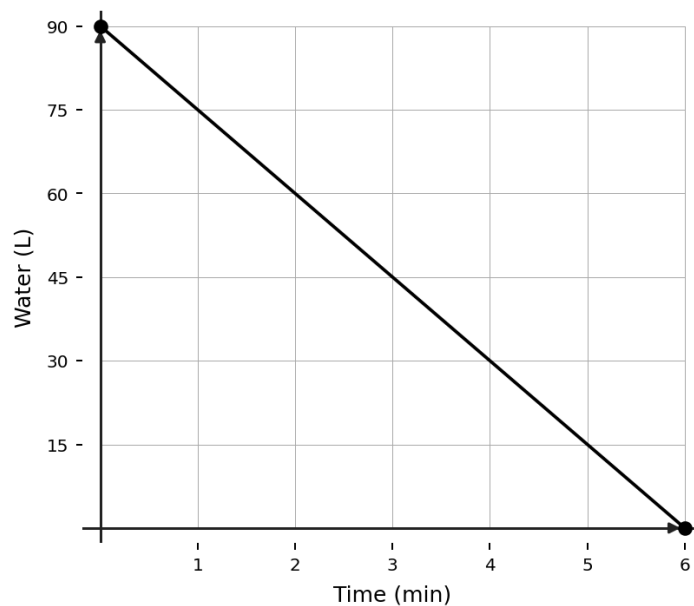

13. I Can: Identify and interpret intercepts when they are shown.

Identify the x-intercept and the y-intercept of the line shown.

14. I Can: Identify and interpret intercepts when they are shown.

The graph shows water remaining in a tank while it drains. Interpret the x-intercept $(6,0)$ in this situation.

15. I Can: Identify and interpret intercepts when they are shown.

A student says, “The point $(0,4)$ is the x-intercept because its x-coordinate is 0.” Explain the error. Then identify both intercepts of the line.
