I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

Evaluate.

$f(x) = 2x + 5;\ f(-3)$

2. I can use input-output rules to represent relationships.

A machine adds 4 and then doubles the result. The output is 18. Find the input.

3. I can use input-output rules to represent relationships.

A function machine triples the input and subtracts 2. What output comes from input 5?

4. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.

I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

5. I can distinguish functions from relationships that are not functions.

Identify the repeated input.

x	-1	2	-1
y	3	5	8

6. I can distinguish functions from relationships that are not functions.

The pairs are $(1, 4), (2, 6), (1, 7)$. Is this relation a function? Explain.

7. I can distinguish functions from relationships that are not functions.

Is $(1, 3), (2, 3), (3, 3)$ a function? Evaluate $2(-3) + 5$.

8. I can distinguish functions from relationships that are not functions.

For $y = 2x - 5$, find the output when $x = -1$.

I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

9. I can write and interpret linear equations in slope-intercept form.

Write an equation.

Slope -3, intercept 4.

10. I can write and interpret linear equations in slope-intercept form.

Write an equation with slope 2 and intercept -5. Decide if $(0, 1), (1, 4), (0, 2)$ is a function.

11. I can write and interpret linear equations in slope-intercept form.

Find the y-intercept.

$y = 5x - 7$

12. I can write and interpret linear equations in slope-intercept form.

For $y = 3x - 4$, find the y-intercept.
