I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

Complete the table.

x	-2	0	4
$y = 3x - 1$	?	?	?

2. I can use input-output rules to represent relationships.

Input	-1	0	2
Output	1	3	7

Describe an operation rule that works for every pair.

3. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.

4. I can use input-output rules to represent relationships.

A function machine triples the input and subtracts 2. What output comes from input 5?

I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

5. I can distinguish functions from relationships that are not functions.

For $y = 2x - 5$, find the output when $x = -1$.

6. I can distinguish functions from relationships that are not functions.

Pairs $(1, 5), (2, 5), (3, 5)$ all have output 5. Is this a function? Explain.

7. I can distinguish functions from relationships that are not functions.

Does $\{(1, 2), (1, 3), (2, 4)\}$ represent a function? Explain.

8. I can distinguish functions from relationships that are not functions.

Identify the repeated input.

x	-1	2	-1
y	3	5	8

I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

9. I can write and interpret linear equations in slope-intercept form.

Write an equation.

Slope -3, intercept 4.

10. I can write and interpret linear equations in slope-intercept form.

Write an equation of a line with slope -2 and y-intercept 5.

11. I can write and interpret linear equations in slope-intercept form.

Does $y = 3x + 2$ pass through (2,8) and (4,15)? Explain.

12. I can write and interpret linear equations in slope-intercept form.

Write an equation with slope 2 and intercept −5. Decide if $(0, 1), (1, 4), (0, 2)$ is a function.
