I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

1. I can write and interpret linear equations in slope-intercept form.

Write an equation.

Slope -3, intercept 4.

2. I can write and interpret linear equations in slope-intercept form.

Does $y = 3x + 2$ pass through (2,8) and (4,15)? Explain.

3. I can write and interpret linear equations in slope-intercept form.

Find the slope.

$y = -\frac{1}{2}x + 6$

4. I can write and interpret linear equations in slope-intercept form.

Find the y-intercept.

$y = 5x - 7$

I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

5. I can use input-output rules to represent relationships.

A machine adds 4 and then doubles the result. The output is 18. Find the input.

6. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.

7. I can use input-output rules to represent relationships.

Write a rule.

Inputs 0,1,2 give outputs 4,7,10.

8. I can use input-output rules to represent relationships.

Input	-1	0	2
Output	1	3	7

Describe an operation rule that works for every pair.
