I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

Evaluate.

$f(x) = 2x + 5;\ f(-3)$

2. I can use input-output rules to represent relationships.

A function machine triples the input and subtracts 2. What output comes from input 5?

3. I can use input-output rules to represent relationships.

A machine adds 4 and then doubles the result. The output is 18. Find the input.

4. I can use input-output rules to represent relationships.

If $y = 2x - 1$, list outputs for $x = 0, 1, 2$. Then solve $2n + 3 = 11$.

I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

5. I can distinguish functions from relationships that are not functions.

The pairs are $(1, 4), (2, 6), (1, 7)$. Is this relation a function? Explain.

6. I can distinguish functions from relationships that are not functions.

Is $(1, 3), (2, 3), (3, 3)$ a function? Evaluate $2(-3) + 5$.

7. I can distinguish functions from relationships that are not functions.

Identify the repeated input.

x	-1	2	-1
y	3	5	8

8. I can distinguish functions from relationships that are not functions.

Pairs $(1, 5), (2, 5), (3, 5)$ all have output 5. Is this a function? Explain.

I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

9. I can write and interpret linear equations in slope-intercept form.

Write an equation with slope 2 and intercept -5. Decide if $(0, 1), (1, 4), (0, 2)$ is a function.

10. I can write and interpret linear equations in slope-intercept form.

Write an equation of a line with slope -2 and y-intercept 5.

11. I can write and interpret linear equations in slope-intercept form.

Does $y = 3x + 2$ pass through (2,8) and (4,15)? Explain.

12. I can write and interpret linear equations in slope-intercept form.

Write an equation.

Slope -3, intercept 4.
