I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

1. I can write and interpret linear equations in slope-intercept form.

For $y = 3x - 4$, find the y-intercept.

2. I can write and interpret linear equations in slope-intercept form.

Write an equation of a line with slope -2 and y-intercept 5.

3. I can write and interpret linear equations in slope-intercept form.

Does $y = 3x + 2$ pass through $(2,8)$ and $(4,15)$? Explain.

4. I can write and interpret linear equations in slope-intercept form.

Find the slope.

$y = -\frac{1}{2}x + 6$

I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

5. I can use input-output rules to represent relationships.

Rules A and B are $2x + 1$ and $x + 3$. At which input do they give the same output?

6. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.

7. I can use input-output rules to represent relationships.

Complete the table.

x	-2	0	4
$y = 3x - 1$	?	?	?

8. I can use input-output rules to represent relationships.

Write a rule.

Inputs 0,1,2 give outputs 4,7,10.
