I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

Evaluate.

$f(x) = 2x + 5;\ f(-3)$

2. I can use input-output rules to represent relationships.

Rules A and B are $2x + 1$ and $x + 3$. At which input do they give the same output?

3. I can use input-output rules to represent relationships.

If $y = 2x - 1$, list outputs for $x = 0, 1, 2$. Then solve $2n + 3 = 11$.

4. I can use input-output rules to represent relationships.

Complete the table.

x	-2	0	4
$y = 3x - 1$	?	?	?

I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

5. I can distinguish functions from relationships that are not functions.

For $y = 2x - 5$, find the output when $x = -1$.

6. I can distinguish functions from relationships that are not functions.

Function or not?

$(0, 1), (2, 3), (0, 4)$

7. I can distinguish functions from relationships that are not functions.

The pairs are $(1, 4), (2, 6), (1, 7)$. Is this relation a function? Explain.

8. I can distinguish functions from relationships that are not functions.

Is $(1, 3), (2, 3), (3, 3)$ a function? Evaluate $2(-3) + 5$.

I CAN CONNECT LINEAR GROWTH IN TABLES, GRAPHS, AND EQUATIONS.

9. I can connect linear growth in tables, graphs, and equations.

x	0	1	2	3
A	1	4	7	10
B	1	4	9	16

Which is linear? Give numerical evidence.

10. I can connect linear growth in tables, graphs, and equations.

A table has $x = 0, 1, 2, 3$ and $y = 3, 7, 11, 15$. Write a rule.

11. I can connect linear growth in tables, graphs, and equations.

Complete the table.

x	0	1	2	3
y	4	7	10	?

12. I can connect linear growth in tables, graphs, and equations.

Find the change per step for outputs 5, 9, 13, 17. Is $(1, 2), (2, 2), (1, 3)$ a function?

I CAN CALCULATE AND INTERPRET SLOPE AS A CONSTANT RATE OF CHANGE.

13. I can calculate and interpret slope as a constant rate of change.

One line has slope -2 and another has slope 3. Compare their directions and rates.

14. I can calculate and interpret slope as a constant rate of change.

Find the slope.

$(-2,1)$, $(2,9)$

15. I can calculate and interpret slope as a constant rate of change.

Find the slope through $(0,3)$ and $(4,11)$. Then evaluate $f(2)$ for $f(x) = 3x - 1$.

16. I can calculate and interpret slope as a constant rate of change.

Find the rise.

(3,−4) to (7,5)

I CAN COMPARE VERTICAL AND HORIZONTAL CHANGES TO FIND SLOPE.

17. I can compare vertical and horizontal changes to find slope.

Find rise/run from (−2,1) to (2,−3). Then find y when $x = 4$ in $y = 2x + 1$.

18. I can compare vertical and horizontal changes to find slope.

Find Δy and Δx from $(1, 3)$ to $(4, 9)$.

19. I can compare vertical and horizontal changes to find slope.

Find the slope between $(-2, 5)$ and $(2, -3)$.

20. I can compare vertical and horizontal changes to find slope.

Calculate the slope.

$(0,-5)$ to $(4,3)$
