I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

1. I can distinguish functions from relationships that are not functions.

The pairs are $(1, 4), (2, 6), (1, 7)$. Is this relation a function? Explain.

2. I can distinguish functions from relationships that are not functions.

Function or not?

$(0, 1), (2, 3), (0, 4)$

3. I can distinguish functions from relationships that are not functions.

Is $(1, 3), (2, 3), (3, 3)$ a function? Evaluate $2(-3) + 5$.

4. I can distinguish functions from relationships that are not functions.

Does $\{(1, 2), (1, 3), (2, 4)\}$ represent a function? Explain.

I CAN COMPARE VERTICAL AND HORIZONTAL CHANGES TO FIND SLOPE.

5. I can compare vertical and horizontal changes to find slope.

Find the slope.

Rise -6, run 3

6. I can compare vertical and horizontal changes to find slope.

Find the slope between $(-2, 5)$ and $(2, -3)$.

7. I can compare vertical and horizontal changes to find slope.

Find Δy and Δx from $(1, 3)$ to $(4, 9)$.

8. I can compare vertical and horizontal changes to find slope.

Find rise/run from $(-2,1)$ to $(2,-3)$. Then find y when $x = 4$ in $y = 2x + 1$.

I CAN WRITE AND INTERPRET LINEAR EQUATIONS IN SLOPE-INTERCEPT FORM.

9. I can write and interpret linear equations in slope-intercept form.

Find the slope.

$y = -\frac{1}{2}x + 6$

10. I can write and interpret linear equations in slope-intercept form.

Write an equation with slope 2 and intercept −5. Decide if $(0, 1), (1, 4), (0, 2)$ is a function.

11. I can write and interpret linear equations in slope-intercept form.

Does $y = 3x + 2$ pass through (2,8) and (4,15)? Explain.

12. I can write and interpret linear equations in slope-intercept form.

Write an equation.

Slope -3, intercept 4.

I CAN INTERPRET SLOPE IN A MOTION SITUATION.

13. I can interpret slope in a motion situation.

Distance from a marker follows $d = 3t + 2$. Find $d(4)$, slope, and y-intercept.

14. I can interpret slope in a motion situation.

A car travels $d = 4t + 3$ meters after t seconds. Find d at $t = 5$.

15. I can interpret slope in a motion situation.

Distance increases from 2 meters to 14 meters in 3 seconds. Find the average rate.

16. I can interpret slope in a motion situation.

Calculate the average speed.

24 miles in 3 hours

I CAN COMPARE AND EXPLAIN RATES OF CHANGE IN CONTEXT.

17. I can compare and explain rates of change in context.

A tank fills at 7 liters per minute. How much is added in 5 minutes?

18. I can compare and explain rates of change in context.

Temperature changes from 18°C to 6°C over 4 hours. Find the rate and interpret its sign.

19. I can compare and explain rates of change in context.

A line rises 9 when x increases 3. Find slope. Another rate is 2.5 per x-unit. Which is greater?

20. I can compare and explain rates of change in context.

Runner A travels 18 meters in 3 seconds. Runner B travels 20 meters in 4 seconds. Who has the greater rate?
