I CAN USE INPUT-OUTPUT RULES TO REPRESENT RELATIONSHIPS.

1. I can use input-output rules to represent relationships.

If $y = 2x - 1$, list outputs for $x = 0, 1, 2$. Then solve $2n + 3 = 11$.

2. I can use input-output rules to represent relationships.

Complete the table.

x	-2	0	4
$y = 3x - 1$	?	?	?

3. I can use input-output rules to represent relationships.

A machine adds 4 to an input, then squares the result. Explain why $(x + 4)^2$ matches but $x^2 + 4$ does not.

4. I can use input-output rules to represent relationships.

A function machine triples the input and subtracts 2. What output comes from input 5?

I CAN DISTINGUISH FUNCTIONS FROM RELATIONSHIPS THAT ARE NOT FUNCTIONS.

5. I can distinguish functions from relationships that are not functions.

Function or not?

$(0, 1), (2, 3), (0, 4)$

6. I can distinguish functions from relationships that are not functions.

Does $\{(1, 2), (1, 3), (2, 4)\}$ represent a function? Explain.

7. I can distinguish functions from relationships that are not functions.

Pairs $(1, 5), (2, 5), (3, 5)$ all have output 5. Is this a function? Explain.

8. I can distinguish functions from relationships that are not functions.

Is $(1, 3), (2, 3), (3, 3)$ a function? Evaluate $2(-3) + 5$.

I CAN CONNECT LINEAR GROWTH IN TABLES, GRAPHS, AND EQUATIONS.

9. I can connect linear growth in tables, graphs, and equations.

Find the slope.

Points (1,3) and (5,11)

10. I can connect linear growth in tables, graphs, and equations.

Complete the table.

x	0	1	2	3
y	4	7	10	?

11. I can connect linear growth in tables, graphs, and equations.

A table has $x = 0, 1, 2, 3$ and $y = 3, 7, 11, 15$. Write a rule.

12. I can connect linear growth in tables, graphs, and equations.

The outputs 2, 5, 8, 11 increase by a constant amount. What is the change per step?

I CAN CALCULATE AND INTERPRET SLOPE AS A CONSTANT RATE OF CHANGE.

13. I can calculate and interpret slope as a constant rate of change.

Find the rise.

$(3,-4)$ to $(7,5)$

14. I can calculate and interpret slope as a constant rate of change.

Find the slope.

$(-2,1), (2,9)$

15. I can calculate and interpret slope as a constant rate of change.

One line has slope -2 and another has slope 3. Compare their directions and rates.

16. I can calculate and interpret slope as a constant rate of change.

Find the slope through $(0, 2)$ and $(3, 8)$.

I CAN COMPARE VERTICAL AND HORIZONTAL CHANGES TO FIND SLOPE.

17. I can compare vertical and horizontal changes to find slope.

Find the slope between $(-2, 5)$ and $(2, -3)$.

18. I can compare vertical and horizontal changes to find slope.

Find rise/run from $(-2,1)$ to $(2,-3)$. Then find y when $x = 4$ in $y = 2x + 1$.

19. I can compare vertical and horizontal changes to find slope.

Find the slope.

Rise -6, run 3

20. I can compare vertical and horizontal changes to find slope.

Calculate the slope.

$(0,-5)$ to $(4,3)$
